1

Installing the Module.

The module installation is simple, follow these steps:

1. Unzip the ZIP file you purchased and you have a folder called " FilterProductsPro"
2. Connect to your FTP client to your server and place the unzipped folder in the directory /modules/ your PrestaShop store, leaving the module in /modules/FilterProductsPro/
3. Go to the back office of your store and login as administrator.
4. Go to the "Modules" tab and look under the "Filter and Search tools" category, the module under the name " FilterProductsPro"
5. Activate the module.

EXTRA NOTES:

✓ To configure the module, click on "Configure" and may make any changes that need.

CONFIGURATION

The module is easy to configure and can be up and running almost instantly.
Login to your Back-Office, and go to settings tab "Modules".

CREATING SEARCH FILTERS.

In the Control Panel, the following options to create a search filter

SEARCH TAB

The search tab defines all areas that will create your search filters. Generally speaking, this tab allows you to generate a name to a block filters and also the location.

☑ **Name:** Enter the name you want to give a block containing search filters. This name is internal and not public. You can type a name that will help you locate your filters.

Example: In the image on the left you can see that there are two blocks of searches, to yellow as you put internal name "superior" and we put blue "left", but you may put any name you want.

☑ **Public Name:** Enter the display name you want to give a block containing filter searches. This name is public and does not affect the configuration of the module, you can write whatever you want.
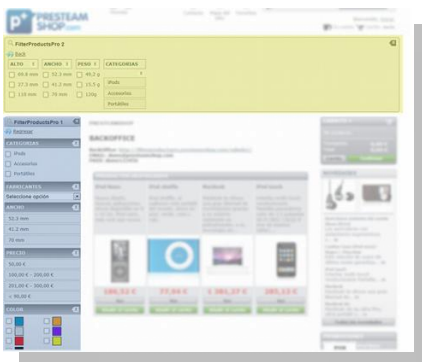

Example: We place the public name "Filter by Size" to search block yellow (whose internal name is "superior") and put the public name "Filter Items" to search block blue (whose internal name is "left")

* Disclaimer: The names "Superior" "Left" and the color "yellow" and "blue" are an example to better represent the image that is on your left.

☑ **Position:** Defines where I want to display the search block in the design of your store.

☑ **Instant Search:** Select or clear, if you want to select a filter to automatically begin filtering, or the user having to click a button to display the results filtering.

☑ **Active:** You must select this option enabled for the search block be visible, or off to hide.

FILTERS y OPTIONS TAB

In this tab, you can specify all filters containing each search block.

- ☑ **Searcher (drop list):** First choose a search block, remember to have a minimal set in order to use this option (to create one, go to the tab "Search")
  - ➢ **Add a Filter:** When you have selected a search block in the dropdown list of "finder". Among the options that appear, you can specify:
  - ➢ **Name:** Set the public name and visible search filter you are creating.
  - ➢ **Value:** You can select from this list, the criteria used in the search filter you are creating. This includes filtering at the discretion of Categories, Attributes, Features, Manufacturer, Supplier, Price or Custom.

NOTE: WHEN SETTING THE STANDARD "CATEGORY" MUST CHOOSE IF YOU WANT TO INCLUDE OR NOT SUBCATEGORIES. YOU WANT TO ADD THE MARK SUBCATEGORIES WHEN YOU CHOOSE A CATEGORY TO INCLUDE ALL SUBCATEGORIES BUT NOT RELY ON THE SHOW THEM (IF YOU WANT DISPLAY, YOU MUST SELECT ALSO). IF YOU DO NOT WANT TO ADD THE SUBCATEGORIES, MOSTRA ONLY PRODUCTS ARE IN THE CATEGORIES TO CHOOSE.

  - ➢ **Type:** You can define the style in which appears his new filtering criteria, which can be as drop-down list box accents, or buttons.
  - ➢ **Num Columns:** Refers to the number of columns to use to display the options. Note that the columns created, you can assign a custom title, Example: if you have a filter called "size" you can assign a column to the stature of men and another column for the likes of Women.
  - ➢ **Save:** Click Save to accept the changes uploaded and generate the search filter.

* Note: When you choose "Custom" from the options of "criteria", please note that you can use the search engine Prestashop or not. If you choose if you want to use, the criteria will be sought for internal engine Prestashop. If you choose do not want to use it, you can create items in the Custom tab.

- ☑ **Filters:** At the bottom left you will find a box called Filters. Here is all prebuilt filters. You can configure the tool icon, you can edit with a pencil icon, you can Deshabitarlos / empower them with the icon of a tick / cross, and you can Delete it by clicking the trash icon.
- ☑ **Options:** In the bottom of the right, find a box called Options which will appear when you click Configure.

4

CUSTOM OPTIONS TAB

In the Filters tab and Options, there is the search term "custom". If you disable the use of search engine Prestashop, then here you can define own settings for items to appear as part of a search.

In short: this can generate their own criteria to show items that otherwise would not have appeared.

- ☑ **Search (Drop list):** Choose a search block first.
- ☑ **Filter (Drop list):** Select the filter criteria has "personalized" it generated in the Filters tab and Options.
- ☑ **Item Name:** Build a public name for the custom channel is generating.

PRICE RANGE TAB

In the Filters and Option tab, you have the search criteria called "prices". If you choose that option, then in this Price Range tab, you can set different price ranges displayed.

Condition (drop list): Select "**Equals**" to filter specific products with a price, select "**Less than**" to filter products with a lower price than specified or "**More than**" to be higher than specified. Select the "**between**" you can select 2 values, which are the minimum and maximum price, and the filter will show all products that are between these 2 ranges.

FILTER DEPENDENCY TAB

Sometimes you need a filter depends on another filter to optimize the search. You can say that filter must preselect the visitor for the second filter (the dependent) starts.

You can build all the dependencies you need.

Example: You can see in the picture, as there are 2 separate units.

On the one hand we have the filter "price" depends on the filter "width" which depends on the filter "categories", so the visitor, first choose the category, then the width and finally the price.

On the other hand, we have the filter "color" it depends "manufacturers" so that the visitor first manufacturer shall select and then Color.

DEPENDENCY OPTIONS TAB

In this section, you can clearly define which product should depend on a given search filter.

For example. We have a search engine called "custom" and the filter is called "Mark". Here, we define that model 1, model 2 and model 3 depending on the "HP" and that only Epson products "Model 4 and Model 5" do.

Thus, refining the results based on your choices the customer in your store.

.

TOOLS TAB

Occasionally, you may add, edit, delete categories, attributes, product names, and other values of their products for sale. To see these changes reflected, you must click on "**Re-Index products**" to regenerate / update the index of the filter, and display their values correctly.
